How **Green** is your footprint?

Spray⁺ is a spray which is applied to sties, surrounds and bedding. Spray⁺ applied to the bedding and surroundings can help suppress any harmful micro-organisms that could cause diseases and the manure will dry quicker, thus making it less odorous. The product is applied after cleaning and topping up of bedding. Spray⁺ helps promote a healthy environment.

Protect⁺ is a topical spray which is applied directly to your pigs. A blend of aromatherapy oils helps to create an environment that does not appeal to flies, fleas, midges, etc. and assists the healing process where bitten. The micro-organisms within the product help to balance the bacteria on the skin, thereby reducing the possibility of infection.

Breathe⁺ is a water-soluble respiratory spray comprising a blend of natural essential oils which provides symptomatic relief for breathing difficulties. Emvelo Breathe⁺ helps to liquefy thick, sticky mucous and help open up breathing passages.

Benefits

Emvelo products work together to demonstrate:

- Natural suppression of the growth of harmful micro-organisms in your pigs' surroundings by balancing the bacteria in the environment.
- A more pleasant and sweeter smelling environment for your pig with lower ammonia levels.
- Freedom from chemicals and pesticides can often make pigs happier and far more responsive.
- Deter annoying flies without the use of chemicals and pesticides
- Lab tests indicate that the products may assist in control of disease such as E.Coli, Salmonella and Campylobacter.
- The manure is less offensive and can be composted directly.
- Compost quality is excellent because it contains live beneficial micro-organisms to re-inoculate the soil and ferment organic material.
- No harmful side effects or withdrawal.

Odour control and effluent disposal problems are virtually eliminated

Healthy pigs thrive within an Emvelo Environment

The Emvelo range of products help empower you to allow your pigs to freely develop their full physical potential in a naturally balanced environment. Whenever Emvelo is used, habitats, but more importantly livestock effluent, is sweeter smelling, free of pathogens and populated with beneficial micro-organisms. It now has a lower biological oxygen demand (BOD) and zero chemical oxygen demand (COD).

This means effluent will compost more easily and in some cases can be used for manure immediately without fear of polluting fields, streams, rivers and dams.
